FOUNDED 1925

Brighton-Best International has over 35 warehouses across 7 countries and has been servicing the fastener world for 90 years. We have 4 fully stocked warehouses in Australia, stocking over 16,000 line items.

Brighton-Best's Global Mill Department has the capability to source almost any product from a multitude of manufactures, in many different countries around the world.

At Brighton-Best International, we understand how important quality is. Breakages and failures are not only time consuming and costly but could also be dangerous. That's why BBI offers total traceability on our entire range of products and can provide the Manufacturers Mill Test Report for any product sold. All BBI Structural products are independently NATA tested in Australia and we have 2 fully accredited A2LA laboratories located in Los Angeles and New Jersey.

BRIGHTON-BEST INTERNATIONAL

Southeast Fasteners now stocks an extensive range of high quality stainless steel fasteners and marine & architectural hardware from James Glen.

For further details please contact Southeast Fasteners

LOCKRITE

WEDGELOCK ANTI-VIBRATION WASHERS

LockRite® Washers are used in applications where bolts are prone to self-loosening during vibration & fluctuating loads ensuring a long term vibration proof environment for just about any bolt or threaded application.

LockRite® Washers

- Are assembled in pairs; cam face to cam face
- Each washer has radial teeth on outside and mating cams on the inside, creating a wedge under the bolt or nut surface locking under tension preventing unintentional loosening of the assembly. Eliminate the need to use adhesives.
- Are reusable unlike many lock nut systems. Are harder than the mating surface to ensure the unique locking function
- For a bolt & nut assembly 2 pairs should be used - one under the head of the bolt and one under the nut.
- Maintains high clamp load and thereby ensures the function of the joint
- Quick and easy to install and remove with standard tools
- Locking function not affected by lubrication
- Can be used with fasteners up to grade 12.9
- Reliable locking, even for joints with short clamp length
- No retightening needed
- Secures fasteners at both high and low preloads
- Are manufactured to DIN 25201 in Spring Steel-48 HRC and Stainless Steel 316

Not recommended where:

- Mating surfaces that are not locked in place
- Mating surfaces harder than the washers
- Very soft mating surface, e.g. wood, plastic
- Non-preloaded joints

The difference is that the cam angle "A" is larger than the thread pitch "B", causing the LockRite® Washers to expand more than the corresponding pitch of the thread.

Bureau Veritas Certification certify that the Management System of this organisation has been audited and found to be in accordance with the requirements of the management system standard detailed below

ISO 9001:2008

WASJET®
WATERJET CUTTING
SOLUTIONS

**Do you require the following
when sourcing componentry
and sheet metal parts???**

- 💧 Accuracy
- 💧 Environmentally friendly
- 💧 Clean process
- 💧 Cost Competitive

WaterJet Cutting is the only way in providing all of these above.

Compared to Laser Cutting, WaterJet is a clean & environmentally friendly process. Water and abrasive are mixed to create an extremely powerful and versatile cutting tool.

Our WASJET® machines can produce cuts of up to 6" (150mm) in thickness and our material stock levels are second to none with the backing of BlueScope Steel as our brand partner.

Profile cutting using hot processes such as Oxy and Laser can cause tempering and a heat affected zone on the material edge. In the case of parts needing further machining on these edges, it can be a costly and laborious exercise. With WaterJet cutting it is a cold process which does not change the original state of the material. This is particularly important if using hardened materials.

Material options include -
Mild Steel, Bisplate®/Hardox®, Stainless Steel, Aluminium, Copper and Brass. Rubber, Thermoplastics, Canvas Bakelite, Fibre & Gasket Materials. Stone and Marble, Ceramic Tiles and Glass.

Our range of material for multiple applications are limitless, as opposed to Laser where there are strict limitations on material type and thickness.

PRESS RELEASE

SHELL GLOBAL *signs* **ENTERPRISE FRAMEWORK AGREEMENT WITH TRI-STAR INDUSTRIES**

TRI-STAR INDUSTRIES PTE LTD is proud to announce that it has been awarded a five year global Enterprise Framework Agreement with Shell for the supply of Studbolts and Fasteners.

This framework agreement enables Shell's MRO (Maintenance, Repairs and Operations) and Project teams worldwide (including their engineering, procurement and construction contractors) to access Tri-Star's expertise and competitiveness in studbolts and fasteners, especially in corrosion resistant PTFE-coated fasteners heavily used in upstream exploration and production facilities.

We offer HSS taps, HSS Dies, Cobalt Taps, Screw Thread

Gauges, Diestocks, Taps Wrenches, Coventry Chasers, Tangential Chasers, Special Threading Tools, Coventry Dieheads, Threadfiles, Cutting Fluids, Rotary Rebar Cutters and many other specialised engineering tools.

Ramset™

Mechanical Anchors

For all your anchoring needs

Ramset™ have been offering mechanical anchors to the market for 50 years. Trusted Ramset™ brand names, like AnkaScrew™, DynaBolt™ and TruBolt™, have become so renowned for their quality, reliability and performance that their names have entered into common language on building sites all over Australia.

Injection mortar FIS V

The versatile injection mortar for anchorings in non-cracked concrete and masonry

BUILDING MATERIALS

Approved for anchorings in:
Concrete C20/25 to C50/60, cracked and non-cracked

Hollow blocks made from lightweight concrete

- Hollow blocks made from concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid brick

Concrete C12/15 to C50/60 (for rebar connections)

Also suitable for:

- Concrete C12/15

FUNCTIONING

- Steelwork constructions
- Timber constructions
- Guard rails
- Façades
- Staircases
- Steel brackets
- Machines
- Masts
- Awnings
- Canopies
- Gates
- Consoles
- Pipelines
- Gratings
- Satellite antennas

APPROVALS

ADVANTAGES

- The FIS V Injection mortar has numerous system approvals, such as in non-cracked concrete, masonry and for rebar connections. FIS V is thus the universal injection mortar family with guaranteed reliability for practically all areas of application.
- FIS VW HIGH SPEED has a significantly shorter curing time than FIS V, thus also ensuring swift work progress even at low temperatures.
- FIS VS LOW SPEED with extended gelling time prevents premature curing of the mortar at higher temperatures and is ideally suited to large drill hole depths.
- The extensive range of accessories is ideally suited to the FIS V injection mortar family, increases the great flexibility of the system and thus allows for a broad range of applications.

Cyberbond®

The Power of Adhesive Information™

Cyberbond Adhesives & Sealants include;

- Thread locking compounds
- Bearing Retainers
- Thread Sealants
- Flange Sealants
- Instant Adhesives (Super Glues)

SAFE AS.

CHOOSING THE RIGHT LENS FOR THE JOB

The correct choice of lens finish plays an important part in the safety glass selection process. Consider the following features of the varied lens type available when deciding what spectacles are needed to get the job done in particular work situations.

AMBER LENSES

The characteristics of the filter show absorption of the blue light in the visible range producing contrast enhancement in low light.

POLARISED LENSES

Polarised lenses filter glare can enhance contrast.

CLEAR LENSES

Provides protection against general indoor hazards.

MIRROR LENSES

The mirror coating reduces the amount of light through the lens by reflecting the glare.

SMOKE LENSES

Filters harmful UV rays as well as visible light and reduces glare from artificial light.

INDOOR/OUTDOOR LENSES

A slight mirror coating on a clear lens allows more visible light through and reduces glare from artificial light.
